NORTHERN WOODS

52' (ENG, GER)

Northern Woods is an entertaining and diverse time trip by the centuries. The film starts in spring and ends in winter.

It is a musical film a a tributeto the Nordic forest: it shows its development from a primeval wood to a cultivated forest. Once populated by wild animals such as wolves, bears, eagles, deer and musk oxen, complex re-enactment-scenes shot by dollies and helicopters vividly depict the colonization of the forest by the Celts and Germans. But as time progressed, the northern forest has on numerous occasions fallen victim to environmental degradation and overexploitation.

Original Title:	Nordwald
Year:	2015
