FASCIA: SECRETS UNDER THE SKIN

52' (ENG, GER, FRE)

Our science documentary on fascia sheds light on state-of-the-art international research. Fascinating images let us delve into one of the virtually unknown cosmos of our bodies.

A fascia is a sheet of connective tissue under the skin, surrounding muscles, bones or joints. Nowadays, these white fibres are considered the leading cause for diseases and pain – and a wondrous source of healing. Elaborate animations and computer graphics shed light on the connection between the fascia and one of our most widespread ailments: back pain. In our film, internationally renowned scientists answer long-unanswered questions while offering insights into cutting-edge fascia research.

Original Title: Unter der Haut - Die verborgene Welt der Faszien

Year: 2017
